

Assignment Employee Payroll Analyzer

Functional Requirements

```
struct Employee
{
    int empId;
    string name;
    double salary;
};
```

Features:

Store employees

Find highest & lowest paid employee

Increase salary by 10% for employees below average

Group employees by salary range

Mandatory STL Usage

```
vector<Employee>
minmax_element
for_each
Lambda expressions
```

Constraints

No for or while loops allowed (except input)

Must use lambda for salary operations
